PLAYBOOK unspool.cc

Rank #1 on Google

Two goals: own the search for “unspool”, and rank for what students actually type (“photosynthesis explained”, “pdf to video”, “how to study a textbook fast”). Every step, every link and the exact text to paste. Work top to bottom; Steps 1–3 matter most and take about an hour.

Updated October 29, 2026 (first version October 19) · New: Steps 7–9 and 56 content pages already live · Files referenced live in the repo under **brand/**

How this works (read once)

When someone searches a brand name, Google ranks the site it is most confident *is* that brand. Confidence comes from four signals, and every step below feeds one of them:

1. **Google knows the site exists**: Search Console and the sitemap (Step 1).
2. **The site says who it is**: brand name in titles plus structured data. *Already done on unspool.cc.*
3. **Trusted sites agree**: matching social profiles and directory listings that link back with the name “Unspool” (Steps 3–4).
4. **People search it and click**: launches, posts and the ads make people type “unspool” and pick your result (Step 5).

Realistic timing. The site usually appears for its own name within a few days to two weeks after Step 1. “Unspool” is also an ordinary English word, and other products may share it. Steps 3–5 are what move you above those over the following 2–8 weeks. No one can guarantee #1, but this is the complete standard method.

Golden rule: be consistent. Use the exact same name (**Unspool**), URL (**https://unspool.cc**), logo and one-line description everywhere. Copy the text in this PDF exactly.

Master copy kit (paste these everywhere)

ONE-LINER (40 CHARACTERS)

```
Turn any document into short study reels
```

TAGLINE (≤60 CHARACTERS)

```
Turn any document into study reels with a quiz in each
```

SHORT DESCRIPTION (≤160 CHARACTERS)

```
Unspool turns PDFs, slides and notes into short study reels with voiceover, captions,
visuals and a quiz. Study in minutes, not hours.
```

MEDIUM DESCRIPTION (≤260 CHARACTERS)

```
Drop in class notes, a textbook chapter, a work PDF or a slide deck. Unspool reads all of
it and turns every key idea into a short reel with a hook, voiceover, word-by-word
captions, visuals and a quick quiz. Free for your first document.
```

LONG DESCRIPTION

```
Unspool turns any document into short, swipeable study reels.

Drop in a PDF, Word doc, PowerPoint, a text file or even a photo of your notes. Unspool
reads the whole thing and plans one reel per key idea, in order, so nothing important gets
skipped: every definition, number, rule and deadline.

Each reel has:
• A hook that makes you want to keep watching
• A natural voiceover
• Word-by-word captions
• A visual for every beat
• A quick quiz at the end, so you know it stuck

Students use it for AP classes, textbook chapters and exam review. Professionals use it for
reports, onboarding guides and contracts.

Your first document is free. Paid plans (Plus, Pro, Ultra) add more reels every week,
longer documents and priority processing, with yearly plans at the best price.

Banners	x-header-1500×500.png, youtube-banner-2560×1440.png, linkedin-company-cover-1128×191.png, facebook-cover-1640×624.png

1 Google Search Console (today, 10 minutes)

1. Open https://search.google.com/search-console and sign in with the Google account that owns the Unspool Google sign-in app.
2. Click **Add property** → choose **Domain** → type **unspool.cc** → Continue. It verifies instantly because your DNS already has the `google-site-verification` TXT record. If it asks again, add the TXT record it shows at your domain registrar (Name/Host **@**, Type **TXT**), wait 5 minutes, click Verify.
3. Left menu → **Sitemaps** → in "Add a new sitemap" type:

```
sitemap.xml
```

4. Click **Submit**. Status should become "Success" within a day.
5. Top search bar (**URL Inspection**): paste each URL below, wait for the result, click **Request indexing**:

```
https://unspool.cc/
https://unspool.cc/s/demo
https://unspool.cc/pricing
https://unspool.cc/about
https://unspool.cc/learn
https://unspool.cc/pdf-to-video
https://unspool.cc/how-to-study-a-textbook-fast
https://unspool.cc/learn/photosynthesis
```

2 Bing Webmaster Tools (2 minutes)

Bing also powers DuckDuckGo, Yahoo and ChatGPT search results.

1. Open https://www.bing.com/webmasters and sign in.
2. Choose **Import your sites from Google Search Console** → allow → select unspool.cc → Import. This brings the sitemap too.
3. If import isn't offered: Add site → **https://unspool.cc** → verify by DNS (add the CNAME/TXT it shows) → Sitemaps → submit **https://unspool.cc/sitemap.xml**.

3 Claim “Unspool” on social sites (same name, logo, link)

Matching profiles that link to unspool.cc are the strongest proof to Google that the brand is yours. Try handles in this order: **unspool**, **unspoolapp**, **unspool.cc**, **getunspool**. Use the same handle everywhere if you can.

MAKER'S FIRST COMMENT (POST IT RIGHT AFTER LAUNCH)

```
Hey Product Hunt 👋

I built Unspool because studying from a 40-page PDF feels impossible, but I could watch 40 short videos without thinking twice.

So Unspool does the boring part: drop in any document (PDF, Word, slides, even a photo of your notes) and it reads the whole thing, plans one reel per key idea, and gives each one a hook, a voiceover, word-by-word captions, visuals and a quick quiz at the end.

Try the demo without signing up: https://unspool.cc/s/demo
Your first document is free.

I'd love to hear what you'd use it for and what to build next 🙏

```

TEXT (PUT IN THE FIRST COMMENT)

```
I made Unspool because I can't focus on a 40-page reading but can watch short videos all
day. You drop in a PDF, slides or notes; it plans one reel per key idea in order (so
nothing gets skipped), writes a hook and script, adds voiceover, word-level captions and a
visual per beat, and ends each reel with a quiz question.

The demo link works without an account. First document is free. Happy to answer anything
about how it's built.
```

Reddit (only where self-promotion is allowed; read each sub's rules)

Good fits: r/SideProject, r/InternetIsBeautiful, r/GetStudying, r/APStudents, r/edtech.

TITLE

```
I built a tool that turns any PDF into short study reels with a quiz at the end
```

POST

```
Reading 40 pages for a class always took me hours, so I built Unspool. You upload a PDF,
slides or notes and it turns every key idea into a short reel with a voiceover, captions
and a quick quiz.

Demo (no sign-up): https://unspool.cc/s/demo
First document is free. Would love honest feedback, especially from anyone studying for
APs.
```

Indie Hackers

Add product: https://www.indiehackers.com/products → “Add your product” · use the Short description and post a short launch story using the Product Hunt first comment.

5 Make people search “unspool”

Google learns that “unspool” means your site when people search it and click your result.

- Post the two ads (brand/social/*.mp4) on TikTok, Instagram Reels and YouTube Shorts, at least 3 times a week. End every caption with: **Search “unspool” or go to unspool.cc**.
- Put the sentence below on screen in the last 2 seconds of each video:

```
Search “unspool” → unspool.cc
```

- Ask friends, classmates and early users to search **unspool** on Google and click unspool.cc (genuine visits only, never bots or paid clicks, which Google penalises).
- Reply to study-related posts and comments with something genuinely helpful, mentioning Unspool only where it fits.

6 Track progress

1. Google: search **site:unspool.cc**. If pages show, you're indexed.
2. Search Console → **Performance** → **+ Add filter** → Query → contains **unspool**. Watch “Average position” fall toward 1.
3. Search Console → **Pages**: everything public should be “Indexed”. Private pages listed as “Excluded by noindex” or “Blocked by robots.txt” is correct.
4. When a knowledge panel for Unspool appears on the right of Google results, click **Claim this knowledge panel** and verify with the Search Console account.

7 Rank for what students search (pages already built)

Ranking for “unspool” only brings people who already know you. These pages bring in students searching for help. They are live on the site, in the sitemap, and marked up with structured data. Your job is to get them indexed and keep adding more.

Page	Targets searches like
unspool.cc/learn (hub) + 50 topic pages, e.g. /learn/photosynthesis	“photosynthesis explained simply”, “mitosis phases”, “supply and demand explained”, “causes of ww1”. Each has a plain-English summary, key points, key terms and an interactive 3-question quiz.
/pdf-to-video	“pdf to video”, “turn pdf into video”
/notes-to-video	“notes to video”, “turn notes into video”
/textbook-to-video	“textbook to video”, “textbook chapter summary video”
/photo-to-study-video	“photo of notes to study”, “picture to study guide”
/ai-study-app	“ai study app”, “study app that makes videos”
/how-to-study-a-textbook-fast	“how to study a textbook fast”, “how to study a chapter”

What to do

1. After the next deploy, in Search Console → **Sitemaps**, click your sitemap and press **Resubmit** (it now lists 63 pages).
2. URL Inspection → **Request indexing** for /learn, the six guide pages and your 5 favourite topic pages. Google finds the rest through the sitemap and the links between pages.
3. Share topic pages where they genuinely help: a classmate asks about mitosis in a group chat or a subreddit, link /learn/mitosis. Real links and clicks are what move rankings.
4. Every week in study season, ask Claude for 10–20 more topics (pick them from what your classes cover and from Search Console queries). More good pages = more searches you can win.
5. Decide whether users can opt in to making their reels public. Public, indexable reel pages (like Quizlet's study sets) are the biggest SEO engine available, but it's a product and privacy decision.

Quality rule: only publish pages that are genuinely useful and accurate. Google's helpful-content systems push down thin or mass-produced pages, so each topic page has a real explanation, terms and a working quiz, not just keywords.

8 Cross-post every video to YouTube Shorts

YouTube Shorts show up in Google's video results, so every TikTok also becomes a Google result. Post every ad to **TikTok, Instagram Reels and YouTube Shorts**.

SHORTS TITLE (A SEARCHABLE PHRASE, NOT THE TIKTOK CAPTION)

```
Why you blank on tests 🧠 #studytips
How to remember what you study #studytips
Why cramming doesn't work #studytips
```

SHORTS TAGS (PASTE AS-IS; 497 OF YOUTUBE'S 500 CHARACTERS)

```
study tips,studytok,how to study,study hacks,studying,exam tips,finals week,how to study
for exams,study tips for students,college study tips,how to remember what you study,active
recall,spaced repetition,forgetting curve,retrieval practice,study smarter,study
techniques,memory tips,learning tips,study motivation,ai study app,ai study tool,study
app,textbook to video,pdf to video,notes to video,study reels,unspool,unspool
app,student,college
```

DESCRIPTION (END OF EVERY SHORT)

```
Turn any document into study reels: https://unspool.cc/?utm_source=youtube
```

Use tagged links in every bio so the owner panel's TikTok / Instagram / YouTube filters count visits correctly: https://unspool.cc/?utm_source=tiktok, ?utm_source=instagram, ?utm_source=youtube.

---

9 Monthly routine (30 minutes)

1. Search Console → **Performance** → sort queries by impressions. Find searches where your **average position is 5–20**: these are closest to page one.
2. Send Claude that list. Improving those exact pages (clearer answer at the top, more detail, a better title) is the fastest ranking win.
3. Search Console → **Pages**: fix anything public that says “Crawled – not indexed” (usually it needs more unique content or more internal links).
4. Check speed: pagespeed.web.dev on a topic page and the homepage. Aim for green on mobile.
5. Get 2–3 new real links a month: a study blog, a student newsletter, a teacher's resource page, a directory from Step 4.

Realistic timing: the brand name usually ranks within a few weeks. Topic and guide pages typically start showing in 1–3 months and climb over 3–6 months as they earn clicks and links. No one can guarantee #1, but this is the complete standard method.

Already done on the site

- Title “Unspool — Turn any document into study reels” and descriptions on every public page
- robots.txt and sitemap.xml (with the three demo videos)
- Canonical URLs, Open Graph and Twitter cards for link previews
- Structured data: Organization, WebSite and SoftwareApplication (free offer)
- Indexable demo page; private pages hidden from search
- Faster pages and zero layout shift on phones (Google uses speed as a ranking factor)

- **New:** /learn hub + 50 topic pages (7 subjects) with summaries, key terms and interactive quizzes
- **New:** 6 guide pages for student searches (pdf-to-video, notes-to-video, textbook-to-video, photo-to-study-video, ai-study-app, how-to-study-a-textbook-fast)
- **New:** structured data for them: BreadcrumbList, LearningResource, Quiz, FAQPage and HowTo
- **New:** sitemap now lists 63 pages; links to the new pages in the header and footers so Google finds them from the homepage
